Utah Cancer Control Program Mission Statement

The mission of the Utah Cancer Control Program is to reduce cancer incidence and mortality in Utah through collaborative efforts that provide services and programs directed toward comprehensive cancer prevention and control through the following:

- Maintain the Utah Cancer Action Network, a group of over 100 people from 60 organizations including hospitals, private clinics, government and community agencies, non-profit organization and other groups who are working together to reduce cancer incidence and mortality for all Utahns.
- Implement the goals and objectives of the State Cancer

Plan written by these member organizations in 2001 and reviewed annually for revisions and updates.

The program also helps reduce morbidity and mortality from breast and cervical cancers by working with LHD's and other community providers statewide to:

- Provide low cost or free breast and cervical cancer screenings (including mammograms) to medically underserved women;
- Provide public and professional education about the need for early detection and availability of screening services;
- Develop and use a statewide surveillance system to plan and evaluate screening and education efforts.
